### Spring Mount

(Deflection : 25mm)

#### ● Features

An open-spring mount is, in general, used together with the additional load base. It is easy to install and check; also its static deflection is visible to the naked eye. The spring is in between the upper cap and the bottom cap without any guide, and the bottom cap is mounted with the base plate having a hole for the anchor bolt. Plus, the steel plate is inserted inside the cap and at the top of the mount, there is a level-control bolt made up of the control bolt, cap, screw and washer. There is also a drain hole inside the bottom base, which facilitates drainage.

- Usage - For pump vibration isolator stand
- For ventilator
- For air conditioning units
- For equipment having a small horizontal reaction

## 2SMA

### Spring Mount

(Deflection : 25mm)

#### ● Features

Open spring mount is, in general, used together with an additional load base. Not only is it easy to install, but it also it a static deflection visible to the naked eye. It is excellent in reducing vibration with left-right and up-down stability. Its upper/bottom housings are made of castings with 2ea mounted springs. Because it is open-type, it can be used to reduce the vibrations that heavy equipment creates without having to use too many.

- Usage - For pumps (single-stage and multi-stage, turbine, double suction types)
- For air conditioning units (horizontal, vertical, hybrid, built-in, detachable, etc)
- For ventilators (sirocco, air-foil, turbo double suction and single suction types, etc)
- For all kinds of vibrating objects
